## Building Embedded Linux Systems Karim Yaghmour

Linux® is being adopted by an increasing number of embedded systems developers, who have been won over by its sophisticated scheduling and networking, its cost-free license, its open development model, and the support offered by rich and powerful programming tools. While there is a great deal of hype surrounding the use of Linux in embedded systems, there is not a lot of practical information. *Building Embedded Linux Systems* is the first in-depth, hard-core guide to putting together an embedded system based on the Linux kernel. This indispensable book features arcane and previously undocumented procedures for:

- Building your own GNU development toolchain
- Using an efficient embedded development framework
- Selecting, configuring, building, and installing a target-specific kernel
- Creating a complete target root filesystem
- Setting up, manipulating, and using solid-state storage devices
- Installing and configuring a bootloader for the target
- Cross-compiling a slew of utilities and packages
- Debugging your embedded system using a plethora of tools and techniques

Details are provided for various target architectures and hardware configurations, including a thorough review of Linux's support for embedded hardware. All explanations rely on the use of open source and free software packages. By presenting how to build the operating system components from pristine sources and how to find more documentation or help, this book greatly simplifies the task of keeping complete control over one's embedded operating system, whether it be for technical or sound financial reasons. Author Karim Yaghmour, a well-known designer and speaker who is responsible for the Linux Trace Toolkit, starts by discussing the strengths and weaknesses of Linux as an embedded operating system. Licensing issues are included, followed by a discussion of the basics of building embedded Linux systems. The configuration, setup, and use of over forty different open source and free software packages commonly used in embedded Linux systems are also covered. uClibc, BusyBox, U-Boot, OpenSSH, thttpd, tftp, strace, and gdb are among the packages discussed.

### From reader reviews:

#### David Bolds:

What do you in relation to book? It is not important along? Or just adding material if you want something to explain what the one you have problem? How about your extra time? Or are you busy individual? If you don't have spare time to complete others business, it is make you feel bored faster. And you have time? What did you do? Every individual has many questions above. They should answer that question since just their can do which. It said that about book. Book is familiar on every person. Yes, it is proper. Because start from on guardería until university need this particular Building Embedded Linux Systems to read.

#### Ruth Santiago:

This Building Embedded Linux Systems tend to be reliable for you who want to certainly be a successful person, why. The main reason of this Building Embedded Linux Systems can be one of the great books you must have will be giving you more than just simple reading food but feed you with information that possibly will shock your before knowledge. This book will be handy, you can bring it just about everywhere and whenever your conditions in the e-book and printed types. Beside that this Building Embedded Linux Systems forcing you to have an enormous of experience for instance rich vocabulary, giving you test of critical thinking that could it useful in your day exercise. So , let's have it and luxuriate in reading.

#### Nicole Norris:

Spent a free the perfect time to be fun activity to perform! A lot of people spent their sparetime with their family, or their very own friends. Usually they accomplishing activity like watching television, gonna beach, or picnic from the park. They actually doing same every week. Do you feel it? Do you need to something different to fill your own free time/ holiday? Can be reading a book can be option to fill your no cost time/ holiday. The first thing you will ask may be what kinds of book that you should read. If you want to consider look for book, may be the reserve untitled Building Embedded Linux Systems can be very good book to read. May be it is usually best activity to you.

#### Gerald Reed:

You may spend your free time you just read this book this guide. This Building Embedded Linux Systems is simple to bring you can read it in the park your car, in the beach, train and also soon. If you did not include much space to bring the particular printed book, you can buy typically the e-book. It is make you quicker to read it. You can save often the book in your smart phone. Thus there are a lot of benefits that you will get when you buy this book.
