Metalearning: Applications to Data Mining (Cognitive Technologies) Pavel Brazdil, Christophe Giraud Carrier, Carlos Soares, Ricardo Vilalta

Metalearning is the study of principled methods that exploit metaknowledge to obtain efficient models and solutions by adapting machine learning and data mining processes. While the variety of machine learning and data mining techniques now available can, in principle, provide good model solutions, a methodology is still needed to guide the search for the most appropriate model in an efficient way. Metalearning provides one such methodology that allows systems to become more effective through experience.

This book discusses several approaches to obtaining knowledge concerning the performance of machine learning and data mining algorithms. It shows how this knowledge can be reused to select, combine, compose and adapt both algorithms and models to yield faster, more effective solutions to data mining problems. It can thus help developers improve their algorithms and also develop learning systems that can improve themselves.

The book will be of interest to researchers and graduate students in the areas of machine learning, data mining and artificial intelligence.

From reader reviews:

Leo Osborne:

Do you among people who can't read pleasurable if the sentence chained from the straightway, hold on guys this particular aren't like that. This Metalearning: Applications to Data Mining (Cognitive Technologies) book is readable by you who hate those straight word style. You will find the info here are arrange for enjoyable examining experience without leaving possibly decrease the knowledge that want to offer to you. The writer involving Metalearning: Applications to Data Mining (Cognitive Technologies) content conveys objective easily to understand by most people. The printed and e-book are not different in the written content but it just different by means of it. So , do you continue to thinking Metalearning: Applications to Data Mining (Cognitive Technologies) is not loveable to be your top list reading book?

Nelson Gendron:

This Metalearning: Applications to Data Mining (Cognitive Technologies) is great e-book for you because the content that is certainly full of information for you who else always deal with world and still have to make decision every minute. This specific book reveal it info accurately using great organize word or we can state no rambling sentences within it. So if you are read it hurriedly you can have whole details in it. Doesn't mean it only provides straight forward sentences but tough core information with lovely delivering sentences. Having Metalearning: Applications to Data Mining (Cognitive Technologies) in your hand like obtaining the world in your arm, data in it is not ridiculous just one. We can say that no e-book that offer you world throughout ten or fifteen tiny right but this guide already do that. So , this really is good reading book. Hey Mr. and Mrs. active do you still doubt that?

Charles Siegrist:

Do you like reading a reserve? Confuse to looking for your selected book? Or your book has been rare? Why so many query for the book? But any people feel that they enjoy for reading. Some people likes studying, not only science book but novel and Metalearning: Applications to Data Mining (Cognitive Technologies) or others sources were given information for you. After you know how the good a book, you feel desire to read more and more. Science guide was created for teacher as well as students especially. Those textbooks are helping them to put their knowledge. In additional case, beside science guide, any other book likes Metalearning: Applications to Data Mining (Cognitive Technologies) to make your spare time more colorful. Many types of book like this.

Elizabeth Branch:

A lot of book has printed but it differs from the others. You can get it by net on social media. You can choose the best book for you, science, amusing, novel, or whatever through searching from it. It is named of book Metalearning: Applications to Data Mining (Cognitive Technologies). You can add your knowledge by it. Without causing the printed book, it might add your knowledge and make a person happier to read. It is

most significant that, you must aware about reserve. It can bring you from one location to other place.
