**Aircraft Systems (Practical Flying Series)** David A. Lombardo

A new edition of a strong title that supplies important how-to information to recreation, private and commercial pilots who fly general aviation aircraft. Each chapter presents a specific aircraft system (i.e., engine, lubricating, fuel, turbocharger, electrical, propellers, landing gear, heating and air conditioning, hydraulic, pneumatic). Coverage for each addresses necessary and relevant science (chemistry, physics, mechanics), preflight procedures, in-flight troubleshooting techniques, emergency procedures, and basic background history. The first edition was a compilation of articles published in Private Pilot magazine. This edition adopts a format and organization of Lombardo's other highly successful title, Advanced Aircraft Systems, resulting in a comprehensively revised and updated product. The first edition featured thirty-one chapters (articles); this book organizes the text into 15 practical, focused and functional chapters.
