Speech Synthesis and Recognition (Aspects of Information Technology)

J. N. Holmes

Speech Synthesis and Recognition (Aspects of Information Technology) J. N. Holmes

An innovative text that covers both synthesis and recognition of speech, by an acknowledged expert. It is written for undergraduate and graduate students of computer science, electronics and information technology, and will be a very useful reference for practising engineers who need to specialise in speech technology. Worked examples, problems, chapter objectives and summaries and a full bibliography are included. The material is highly topical including speech synthesis from stored human speech, speech synthesis by rule and speech recognition of whole words, plus a complete chapter on digital coding of speech and a full discussion of the basic principles, mechanisms and models involved. This book should be of interest to second and third year undergraduates in computer science and electrical/electronic engineering; undergraduates and postgraduate students of information technology; engineering and computing professionals.

From reader reviews:

Alyssa Cox:

What do you with regards to book? It is not important along? Or just adding material when you require something to explain what your own problem? How about your free time? Or are you busy man or woman? If you don't have spare time to do others business, it is give you a sense of feeling bored faster. And you have time? What did you do? Every person has many questions above. They have to answer that question simply because just their can do which. It said that about e-book. Book is familiar on every person. Yes, it is proper. Because start from on pre-school until university need this Speech Synthesis and Recognition (Aspects of Information Technology) to read.

Steven Williams:

In this period of time globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The fitness of the world makes the information better to share. You can find a lot of referrals to get information example: internet, classifieds, book, and soon. You will observe that now, a lot of publisher that will print many kinds of book. The book that recommended to your account is Speech Synthesis and Recognition (Aspects of Information Technology) this e-book consist a lot of the information of the condition of this world now. This kind of book was represented so why is the world has grown up. The words styles that writer value to explain it is easy to understand. The writer made some investigation when he makes this book. That is why this book acceptable all of you.

Daniel Slater:

Is it you who having spare time then spend it whole day simply by watching television programs or just telling lies on the bed? Do you need something new? This Speech Synthesis and Recognition (Aspects of Information Technology) can be the solution, oh how comes? It's a book you know. You are so out of date, spending your extra time by reading in this completely new era is common not a geek activity. So what these guides have than the others?

Robert Howard:

That e-book can make you to feel relax. That book Speech Synthesis and Recognition (Aspects of Information Technology) was bright colored and of course has pictures on there. As we know that book Speech Synthesis and Recognition (Aspects of Information Technology) has many kinds or type. Start from kids until adolescents. For example Naruto or Investigator Conan you can read and think you are the character on there. Therefore , not at all of book are usually make you bored, any it offers up you feel happy, fun and unwind. Try to choose the best book in your case and try to like reading that.
