Atlas of Neoplastic Pulmonary Disease: Pathology, Cytology, Endoscopy and Radiology

The diagnosis of lung cancer and benign pulmonary put forward images that in our opinion best represent tumors can be challenging. This diagnosis can be facilitated by the study of images that allow recognition of the collaboration and materials from other workers in the patterns of disease, both at the clinical and pathologic field levels. Conceptually defined, atlases are specialized books. The atlas is organized into 11 parts containing 41 chapters that rely heavily upon images to illustrate any subject matter, closely following the 2004 Classification of Lung Tumors by the World Health Organization (WHO). Fitting with such a concept, this atlas was developed to fill a void in the approach to diagnosis. In contrast to previous conventional atlases, this atlas is unique in that it begins with tumors of children from four major disciplines (endoscopy, radiology, followed by sections on benign epithelial tumors, salivary histopathology, and cytopathology) involved in the study of gland tumors, mesenchymal neoplasms, lymphoproliferative and diagnosis of lung tumors are brought together in a single volume. miscellaneous tumors.
