Métodos computacionais aplicados à agricultura: Python & Weka (Portuguese Edition) Sérgio Silva Ribeiro

"Métodos computacionais aplicados à agricultura: Python & Weka" traz as possibilidades tecnológicas de um dos setores mais importantes da economia. Lançado em e-book, o livro aborda assunto inovador na literatura nacional de TI, e mostra como a tecnologia é importante muito além dos desktops.

A agricultura é uma atividade essencial ao desenvolvimento humano há milênios, tornando-se um setor econômico de suma importância à nossa sobrevivência. Para seu total aproveitamento, técnicas foram, e continuam sendo desenvolvidas, para o acompanhamento de como os alimentos nascem, se desenvolvem, quais podem ou não ser ingeridos, além do planejamento de suas safras.

A aplicação de métodos computacionais como o processamento digital de imagem, mineração de dados, banco de dados e outros, tem sido amplamente utilizada para que os agricultores obtenham melhores resultados em suas colheitas. Além disso, a necessidade de diminuição do impacto ambiental e a diminuição de áreas cultiváveis exigem técnicas que contribuam para o aumento produtivo.

Países tecnologicamente desenvolvidos produzem mais que países com modelos agrícolas ultrapassados. Essa tecnologia está ligada ao desenvolvimento de insumos, máquinas, estudos de solo e, sobretudo, a produção de sementes e grãos. Para esse domínio, são mostrados conceitos teóricos e exemplos práticos de códigos em Python e uso da ferramenta Weka. A ideia é que o livro seja referência para quem trabalha com pesquisa em computação aplicada à área.
