Quantum Tunneling and Field Electron Emission Theories

Shi-Dong Liang

Quantum Tunneling and Field Electron Emission Theories Shi-Dong Liang

Quantum tunneling is an essential issue in quantum physics. Especially, the rapid development of nanotechnology in recent years promises a lot of applications in condensed matter physics, surface science and nanodevices, which are growing interests in fundamental issues, computational techniques and potential applications of quantum tunneling.

The book involves two relevant topics. One is quantum tunneling theory in condensed matter physics, including the basic concepts and methods, especially for recent developments in mesoscopic physics and computational formulation. The second part is the field electron emission theory, which covers the basic field emission concepts, the Fowler–Nordheim theory, and recent developments of the field emission theory especially in some fundamental concepts and computational formulation, such as quantum confinement effects, Dirac fermion, Luttinger liquid, carbon nanotubes, coherent emission current, quantum tunneling time problem, spin polarized field electron emission and non-equilibrium Green's function method for field electron emission.

This book presents in both academic and pedagogical styles, and is as possible as self-complete to make it suitable for researchers and graduate students in condensed matter physics and vacuum nanoelectronics.

From reader reviews:

Charity Reulet:

The book Quantum Tunneling and Field Electron Emission Theories can give more knowledge and also the precise product information about everything you want. So why must we leave the best thing like a book Quantum Tunneling and Field Electron Emission Theories? A few of you have a different opinion about e-book. But one aim that book can give many details for us. It is absolutely proper. Right now, try to closer along with your book. Knowledge or details that you take for that, you can give for each other; you may share all of these. Book Quantum Tunneling and Field Electron Emission Theories has simple shape however you know: it has great and large function for you. You can look the enormous world by available and read a publication. So it is very wonderful.

Cicely Silber:

Now a day people who Living in the era exactly where everything reachable by match the internet and the resources inside can be true or not demand people to be aware of each info they get. How people have to be smart in obtaining any information nowadays? Of course the correct answer is reading a book. Reading through a book can help people out of this uncertainty Information specially this Quantum Tunneling and Field Electron Emission Theories book as this book offers you rich details and knowledge. Of course the data in this book hundred per-cent guarantees there is no doubt in it everbody knows.

David McClure:

Is it anyone who having spare time subsequently spend it whole day by watching television programs or just lying down on the bed? Do you need something new? This Quantum Tunneling and Field Electron Emission Theories can be the respond to, oh how comes? The new book you know. You are thus out of date, spending your time by reading in this brand new era is common not a nerd activity. So what these publications have than the others?

Vivian Stafford:

As a pupil exactly feel bored to reading. If their teacher questioned them to go to the library in order to make summary for some publication, they are complained. Just little students that has reading's soul or real their leisure activity. They just do what the professor want, like asked to go to the library. They go to at this time there but nothing reading very seriously. Any students feel that looking at is not important, boring and also can't see colorful photos on there. Yeah, it is to be complicated. Book is very important in your case. As we know that on this era, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore this Quantum Tunneling and Field Electron Emission Theories can make you experience more interested to read.
