Para esta edição escolhemos mais uma remessa com 100 circuitos que podem ser usados para interfacear com microcontroladores tendo como ponto de partida o Arduino. No entanto, eles também são compatíveis com outros microcontroladores como PICs, MSP430. E muitos outros, em alguns casos exigindo apenas modificações ou alterações de valores de componentes. Estes circuitos, denominados Shields, podem ser tanto usados para transferir os sinais de um microcontrolador a um circuito externo, como podem ser os próprios circuitos externos usados pelo microcontroladores. Eles também podem ser usados para transferir sinais de sensores e outras fontes para os microcontroladores. Todos eles usam componentes comuns.
