## **Mitochondrial Function, Part A: Mitochondrial Electron Transport Complexes and Reactive Oxygen Species (Methods in Enzymology)**

The first of two new volumes covering mitochondria, this volume presents modern methods that have been developed to examine mitochondrial electron transport chain complexes, iron-sulfur proteins and reactive oxygen species. These new techniques provide investigators with sensitive, original approaches to the study of disease states associated with mitochondrial malfunction.

The critically acclaimed laboratory standard for 40 years, Methods in Enzymology is one of the most highly respected publications in the field of biochemistry. Since 1955, each volume has been eagerly awaited, frequently consulted, and praised by researchers and reviewers alike. With more than 400 volumes published, each Methods in Enzymology volume presents material that is relevant in today's labs -- truly an essential publication for researchers in all fields of life sciences.

New methods focusing on the examination of normal and abnormal mitochondrial function are presented in an easy-to-follow format by the researchers who developed them

Along with companion volume covering mitochondrial diseases and defects, provides a comprehensive overview of modern techniques in the study of mitochondrial malfunction

Provides a "one-stop shop" for tried and tested essential techniques, eliminating the need to wade through untested or unreliable methods
